

# Digital Technologies - Satisfactory - Years 5 and 6

## Portfolio summary

This portfolio of student work shows that the student can explain the fundamentals of digital system components (hardware, software and networks) and how digital systems are connected to form networks (WS3). The student can explain how digital systems use whole numbers as a basis for representing a variety of data types (WS4).

The student can define problems in terms of data and functional requirements and design solutions by developing algorithms to address the problems (WS1, WS2). The student can incorporate decision-making, repetition and user interface design into their designs and implement their digital solutions (WS1, WS2), including a visual program (WS2). They explain how information systems and their solutions meet needs and consider sustainability (WS1). Students manage the creation and communication of ideas and information in collaborative digital projects using validated data and agreed protocols (WS1, WS2).

## Digital project: Learning tool

### Sample summary

Students collaboratively designed a learning tool featuring branching and repetition. The learning tool aimed to provide opportunities for players (Year 3 and 4 students) to explore, practise and apply mathematical concepts and skills (multiplication and division). The learning tool provided opportunities for the player to work through levels. Students also collected and validated data about what the students already knew about multiplication using three simple tests before and after using the learning tool. They collated the data from six students, represented it in a graph and commented on their findings. Students evaluated the solution.

Pre-test: Multiplication  
Pre-test 1 recording sheet

Instructions: Read these questions to the Year 4 student who is taking the test:  
I am going to ask you ten questions about times tables. You have to work them out without a calculator or a pencil and paper. I will check your answer and at the end I will tell you your score out of ten.

Are you ready? Let's go. ✓ X

Question	Answer	A	B	C	D	E	F
1. $12 \times 9$	18						
2. $5 \times 6$	30						
3. $10 \times 0$	0						
4. $5 \times 1$	5						
5. $3 \times 7$	21						
6. $3 \times 12$	36						
7. $7 \times 2$	14						
8. $4 \times 3$	12						
9. $15 \times 5$	50						
10. $4 \times 10$	40

**Pre-test 3 recording sheet**

How good are you at multiplication?

For each question shade in the box which has the right answer. Here is an example:

$3 \times 5 =$   12  20  13  35

1.  $2 \times 8 =$   16  26  14  10

2.  $3 \times 3 =$   10  13  6  9

3.  $5 \times 10 =$   50  55  13  45

4.  $3 \times 6 =$   18  36  9  24

5.  $6 \times 7 =$   44  42  47  34

6.  $6 \times 10 =$   50  60  40  65

7.  $5 \times 9 =$   55  14  41  45

8.  $2 \times 0 =$   2  20  0  11

9.  $10 \times 6 =$   64  14  24  40

10.  $3 \times 11 =$   64  33  31  34

**Multiplication pre and post-test results**

**Collecting data**  
Collate the data from the pre-test and post-tests in an Excel spreadsheet and paste below.

Student	A	B	C	D	E	F
Pre-test 1	5	8	7	10	7	10
Post-test 1	8	10	7	10	8	10
Pre-test 2	6	10	6	10	7	8
Post-test 2	7	10	7	10	8	10
Pre-test 3	6	8	6	10	8	10
Post-test 3	7	10	7	10	10	10

**Representing data**  
Represent the data you have collected using an Excel chart and paste below.

**Interpreting and validating the data (add a comment here)**  
Student A improved their results in all tests, because we tested in 3 ways, the data we collected was good. For most kids the learning tool helped them do better.

**Evaluating (How does the solution meet needs and consider sustainability?)**  
The learning tool made learning multiplication and division fun and kids got better. It is sustainable because it can be reused and doesn't waste paper.

## Annotations

**1 Annotation 1**  
Collates data from pre-tests and post-tests in a table

**2 Annotation 2**  
Represents data using a side-by-side column graph

**3 Annotation 3**  
Explains the pre-test and post-test data

**4 Annotation 4**  
Describes how the data were validated

**5 Annotation 5**  
Evaluates the impact of the learning tool and

explains why it is a sustainable solution

## Digital project: Scratch game

### Sample summary

Students designed a game for a buddy using Scratch visual programming language. They selected a challenge from three options and defined the problem. They designed and implemented the digital solution and recorded their development process.

### Achievement standard

#### Subject

#### Learning Area

By the end of Year 6, students explain the fundamentals of digital system components (hardware, software and networks) and how digital systems are connected to form networks. They explain how digital systems use whole numbers as a basis for representing a variety of data types.

Students define problems in terms of data and functional requirements and design solutions by developing algorithms to address the problems. They incorporate decision-making, repetition and user interface design into their designs and implement their digital solutions, including a visual program. They explain how information systems and their solutions meet needs and consider sustainability. Students manage the creation and communication of ideas and information in collaborative digital projects using validated data and agreed protocols.

#### Game development

#### Annotations

- 1 Annotation 1**  
Defines the problem to be solved in the game
- 2 Annotation 2**  
Identifies a list of functional requirements
- 3 Annotation 3**  
Writes a basic algorithm (step-by-step instructions), including input and output

## Annotations

- 1 Annotation 1**  
 Communicates ideas for designing a digital solution by drawing a flowchart that features one of the graphical user interfaces presented in the game

Divide and assign the tasks to each member of the group

Group member name	Task to be carried out
	Develop Sprites
	Programming
	Final Music
	Documentation

Evaluation - is your game interesting and appealing? Is it intuitive and easy to use? Does it address the functional requirements you identified?

I think the game is very interesting and appealing. In it is a cake character, did you have to try and get him through the maze.

Yes it address the functional requirements. Here is a character, animation and music.

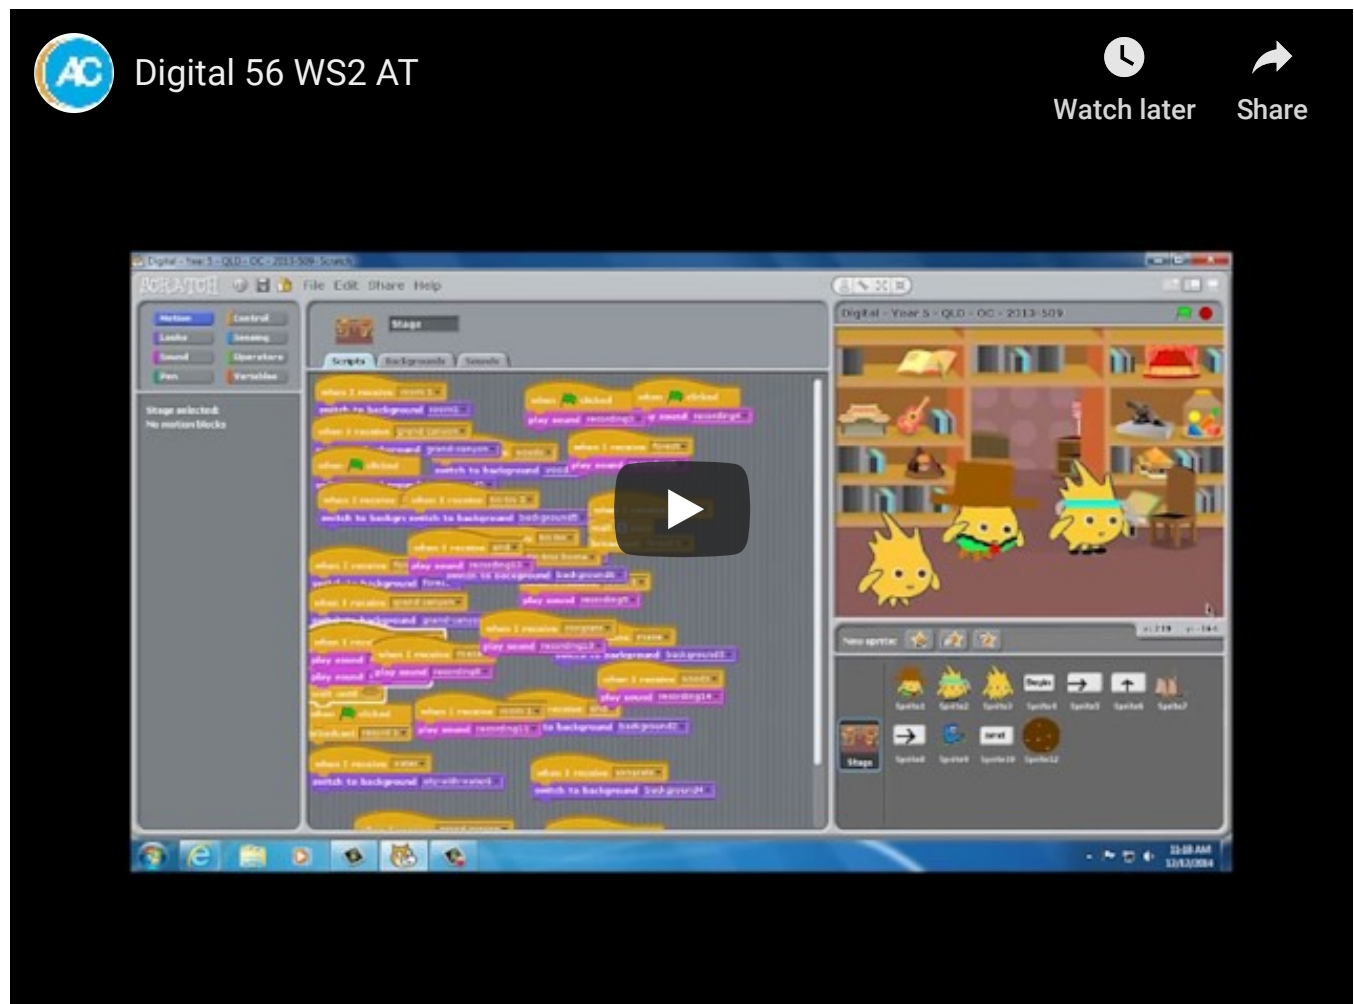

## Annotations

- 1 Annotation 1**  
 Plans the collaborative creation of a digital solution
- 2 Annotation 2**  
 Provides a sound description of the game
- 3 Annotation 3**  
 States how the game addresses the identified functional requirements

## Scratch game

---

## Presentation: School system

### Sample summary

Throughout the year, students have been using and considering the purpose of a range of digital system components and how these components can be connected. Students were asked to verbally explain and justify the classroom network.

### Achievement standard

#### Subject

#### Learning Area

By the end of Year 6, students explain the fundamentals of digital system components (hardware, software and networks) and how digital systems are connected to form networks. They explain how digital systems use whole numbers as a basis for representing a variety of data types.

Students define problems in terms of data and functional requirements and design solutions by developing algorithms to address the problems. They incorporate decision-making, repetition and user interface design into their designs and implement their digital solutions, including a visual program. They explain how information systems and their solutions meet needs and consider sustainability. Students

manage the creation and communication of ideas and information in collaborative digital projects using validated data and agreed protocols.

### Recorded explanation

## Worksheet: Whole numbers

### Sample summary

Students were introduced to whole numbers using a CS Unplugged video and unplugged group activities. Students completed a worksheet to assess their understanding of binary numbers.

### Achievement standard

#### Subject

#### Learning Area

By the end of Year 6, students explain the fundamentals of digital system components (hardware, software and networks) and how digital systems are connected to form networks. They explain how digital systems use whole numbers as a basis for representing a variety of data types.

Students define problems in terms of data and functional requirements and design solutions by developing algorithms to address the problems. They incorporate decision-making, repetition and user interface design into their designs and implement their digital solutions, including a visual program. They explain how information systems and their solutions meet needs and consider sustainability. Students manage the creation and communication of ideas and information in collaborative digital projects using validated data and agreed protocols.

### Binary numbers

**Binary Numbers**

What do you notice about the number of dots on the cards?  
*Doubles each bigger times 2*

How many dots would the next card have if we carried on to the left? Explain your answer.  
 $16 \times 2 = 32$

How many cards do I need in order to reach a card with 128 dots?  
 $8$

We can use these cards to make numbers by turning some of them face down and adding up the dots that are showing. Be sure to draw all 5 cards, turn over (draw black boxes) for those not needed (See example on the next page).

Make 6:

Make 15:

### Annotations

- 1 **Annotation 1**  
 Demonstrates understanding of the binary number system of 0s and 1s

When a binary number card is not showing, it is represented by a zero. When it is showing, it is represented by a one. This is the binary number system.

$0 \ 1 \ 0 \ 0 \ 1 = 9$

Make 11001:

What number is this in decimal?  
 \_\_\_\_\_

What would 17 be in binary?  
 $10001$

Can you work out what 10101 is?  
 $21$

What about 11111?  
 $31$

What day of the month were you born? Write it in binary.  
 $13 \ 01101$

### Annotations

- 1 **Annotation 1**  
 Converts binary to decimal

Try to work out these coded numbers:

= 01001 (@=1, @=0) 9	= 1001 (@=1, @=0) 5	= 1101 (@=1, @=0) 13	= 1011 (@=1, @=0) 11
= 10 (@=1, @=0) 2	= 0 (@=1, @=0) 0	= 1011 (@=1, @=0) 11	= 1111 (@=1, @=0) 15

Why do you think the computer uses binary?  
*Other numbers are too big. They use bits. Bits mean binary digits.*

### Annotations

- 1 **Annotation 1**  
 Recognises patterns
- 2 **Annotation 2**  
 Explains why binary is used in computing
